MATERIALS SCIENCE SEMINAR 30/3/2017 2.30 pm Grassano room Department of Physics

The fascinating world of Carbon nanomaterials

Manuela Scarselli, Dipartimento di Fisica, Università degli Studi di Roma “Tor Vergata”

In this seminar, I will show why the advent of the novel Carbon allotropes has provided the scientific community with an extraordinary opportunity to find a fruitful match between experiment, theory, and simulation. Then I will focus on the most striking applications investigated by the research group of “Tor Vergata”.
